

SERVICE OVERVIEW

INTRUSION AND THREAT DETECTION

Our Intrusion and Threat Detection service provides complete visibility to and detection of intrusions, anomalies, compromise, and other potential threats. An Open XDR Artificial Intelligence Engine continuously “learns” normal conditions over time, improving detection capability and reducing false positives. OrbitalFire cybersecurity experts provide immediate triage, analyze, and escalation of verified incidents, ensuring that all events are handled effectively.

BENEFITS

- o Reduced Disruption, Loss, and Damage from Incidents
- o Enhanced Detection and Response Capabilities
- o Reduced Time-to-Detection (TTD)
- o Improved Regulatory Compliance

FEATURES

- o 24x7 monitoring of networks, servers, devices, workstations, and applications reduces Time to Detection (TTD).
- o AI-based intelligence collection and event correlation provides industry best detection across all assets, networks and endpoints.
- o Comprehensive visibility of on-premises, cloud, hybrid, remote and virtual assets eliminates “blind spots”.
- o Sophisticated learning algorithms reduce false positives over time, reducing noise.
- o Automatic 8x5 triage, analysis, and escalation of alerts minimizes disruption and losses from cybercrime.
