# ORBITALFIRE
CYBERSECURITY

SERVICE OVERVIEW

CONFIGURATION MANAGEMENT

Our Configuration Management service provides standards-based implementation of hardened security configurations and monitoring, leading to reduced exposure and risk of system compromise. OrbitalFire cybersecurity experts conduct comprehensive scans to identify "configuration drift" and other violations, reducing the time required for remediation.

BENEFITS

o   Reduced Technical Risk

o   Expedited "Configuration Drift" Detection

o   Hardened System Configurations

o   Improved Regulatory Compliance

FEATURES

Monthly Performance Reports ensure that customers always have the latest configuration intelligence.

o   Comprehensive scanning of servers, workstations, PCs and network devices for security configuration violations

o   Expert analysis and prioritization of discovered violations

o   Optimized remediation plans based on root cause

o   Detailed reporting
